RECOMENDATIONS

1 - Growth is steady in 2018, showing improvement from the previous year every month. The data ends in August so September should not be compared

2 - Revenue is concentrated: SP is about 38% of the total, so it is both the main market and the main risk. It is the biggest state in the country, but there is possibility for increase other markets.

3 - Only 3.1% of customers return, so the biggest opportunity is converting one-time buyers, not necessarily winning new ones.

4 - Late deliveries (7.9% of orders) get clearly lower reviews, so improving logistics in the slowest states protects satisfaction.
